

REVTECH INDUSTRIES · CONFIDENTIAL

Artemis + Gaia.

A wellness companion that learns from voice, journal, and body signals — paired with the Gaia Neural Band hardware path.

Software live | Hardware in prototype | Privacy-first

$15.2B digital mental health market by 2030

01 · PROBLEM

Wellness tools don’t know the body.

1 in 4
Adults face mental health challenges; access and continuity remain broken.

$280B+
Annual economic burden of untreated mental health issues in the U.S.

Fragmented
Chatbots, journals, and wearables don’t share one living companion context.

- Expensive, appointment-gated care with long waits
- Generic apps with no biodata memory
- Wearables that track numbers but don’t coach in the moment
- Cloud-first products that treat journals as marketing fuel

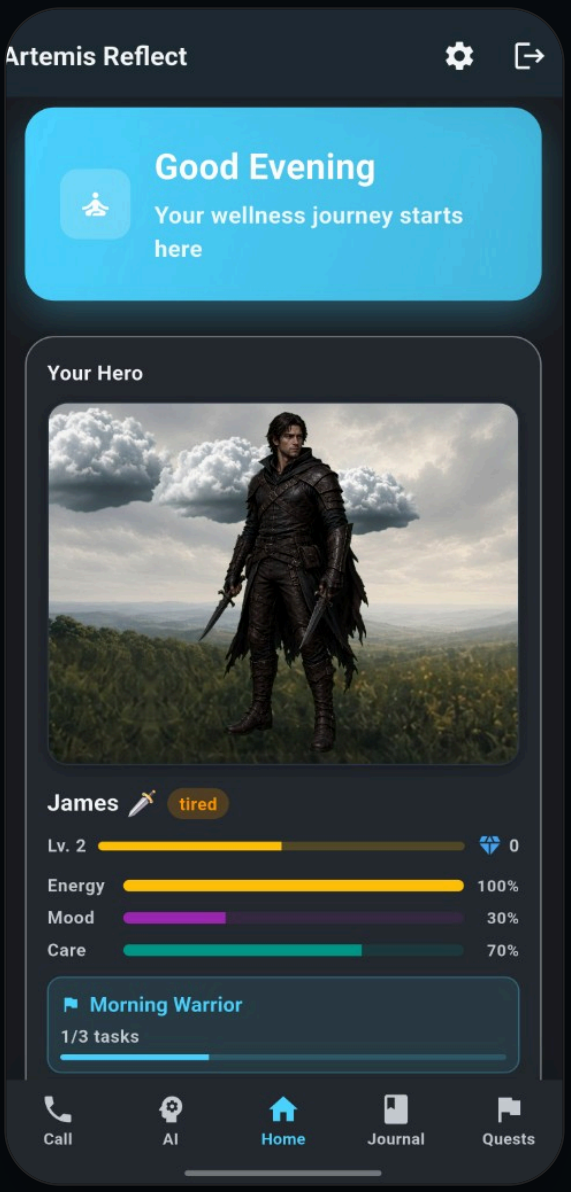

02 · SOLUTION

One companion. Software today. Sensing tomorrow.

Artemis Reflect

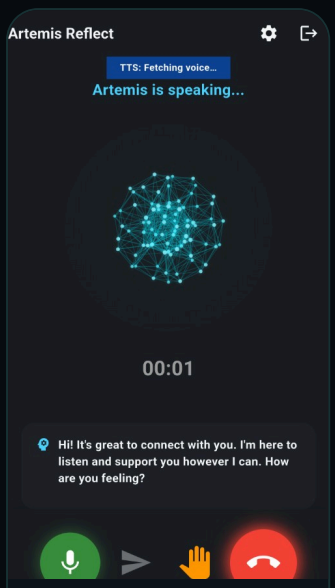

An intelligent wellness companion — voice, text, journaling, quests, nutrition, and workouts in one Flutter experience for Android and Windows.

- Live voice with neural TTS and offline fallback
- Living memory from mood and body readings
- RPG hero that tracks energy, mood, and care
- Local-first processing for sensitive data

05 · WHY US

Differentiation

Companion, not chatbot

Voice + journal + quests + nutrition share one memory and one emotional model.

Body-linked coaching

Designed to absorb live biodata and wearables — Gaia closes the loop without a distracting screen.

Local-first privacy

Sensitive mental health context stays under user control; cloud is optional and explicit.

Hardware path proven

From cylinder prototype to 3D-printed band to product vision — not a slideware wearable.
